

MA052X-2 AUTO TOBACCO BARN TEMPERATURE & DAMPER CONTROL

TAKES THE GUESSWORK OUT OF CURING

Curing tobacco is a demanding occupation. The last thing any grower needs to worry about is the temperature of his barns. The MA052X provides accurate temperature control with no day to night variation. The Auto-restart feature will keep the barn operating at the proper temperature in the event of a burner misfire. With very accurate control the unit will reduce fuel consumption. The reliability and user friendly interface of the MA052X will make it the curemans best friend.

Why the Cureco MA052X series of controls?

The MA052X controls have been proven in the field for 15 years. All previous generations are completely downward compatible making service and parts readily available. Upgradeable for features and future applications makes the unit very flexible for any industry. The MA052X is manufactured to industrial specifications and standards. Most importantly the MA052X was designed with suggestions from tobacco growers and engineers.

Specifications:

- Functionally replaces previous controls
- Constant real-time temperature display
- Multiple electronic advance rates
- Automatic damper control
- Automatic power failure recovery
- Burner Auto-restart (Not functional for manual reset)
- $\pm 8^{\circ}\text{F}$ tracking alarm, NC contact for existing alarm system*

Standard Accessories:

- Wetbulb reservoir assembly
- Belimo damper motor and mounting hardware

Extras:

- Installation
- Computer monitoring (127 barns in multiple locations)
- Manual safety thermostat
